DANABOL+PRIMOBOL+PROPANDROL CYCLE FOR MUSCLE GROWTH

Great decision for beginners, who decided to use anabolic steroids. This cycle will help to achieve good results of growing muscle mass, without negative consequences, which are connected with aromatization of testosterone.

DANABOL is representative of the reinforced group of steroids, oral type, which help to improve fast athlete's performance in a short time. During the cycle athlete notes the increasing of muscle tone, power indicators and good mood. Component based on **PRIMOBOL** is linked with testosterone, they perfectly complement each other. Is observed improvement of athlete's health, growth of muscles is accelerated, liquid delay is minimal. Substance **PROPANDROL** doesn't lead to any negative symptoms during the cycle. The athlete should remember that the key to success is the good diet with high protein and carb components, and quality training in the gym.

How to use?

The cycle is designed for 7 weeks.

First week **DANABOL** 10mg/tab (Balkan Pharmaceuticals) 2 tablets per day.

Second-Fifth week **DANABOL** 10 m/tab (Balkan Pharmaceuticals) 3 tablets per day.

PRIMIBOL Inj 10*1ml amp (100mg/ml) from first till fifth week Monday and Thursday on 100mg.

PROPANDROL 10*1 amp (100mg/ml) from first till fifth week Tuesday and Friday on 100mg.

CLOMED 50mg/tab (Balkan Pharmaceuticals) sixth week- two tablets per day, seventh week –one tablet per day.
