Detailed Description

This is an injectable drug of **methandienone**, a fairly powerful anabolic and androgenic steroid intended for parenteral use (intramuscular injection). **Dianoged-inj** is available in the oil-based form. Manufacturing company - Euro Prime Pharmaceuticals. In bodybuilding, it is used primarily in power and mass-gaining courses, when the athlete is faced with the task of quickly increasing strength and gaining mass.

The active substance of the drug, the steroid **methandienone**, is a derivative of testosterone. It has long been well known to the bodybuilders. The first methane

trademarks (slang reduction) appeared on the US pharmaceutical market in the late fifties of the last century. It is noteworthy that initially the steroid was not considered a sports dope at all, because at that time only truly dangerous (including narcotic) substances, such as amphetamine or cocaine, were banned for athletes.

What is good about **Dianoged-inj**? Of course, a pronounced effect, as well as an oil base, which, with combination courses (with other oil-based steroid preparations) allows you to perform batches in the same syringe. Plus, to achieve the maximum effect, you do not have to take 3-5 tablets daily, as in the case of oral **methandienone**. It is enough to do an injection once a day.

Dianoged-inj steroid profile (EPF): anabolic activity index - 200% of testosterone, androgenic activity index - 50% of testosterone; half-life - up to 6-8 hours, detection time - at least 5 weeks; aromatization (conversion to estrogen) - yes, moderate; decreased HPTA function (suppression of testosterone synthesis) - yes, moderate; hepatotoxicity - yes, low; progestogenic activity - no.

What is the effect of **Dianoged-inj**? First of all, the drug contributes to: gaining muscle mass, increasing strength indicators, increasing performance, accelerating recovery, increasing appetite, strengthening the skeletal system. It has anabolic and androgenic, as well as anti-catabolic effects.

What side effects can **Dianoged-inj** provoke? If you do not abuse the dosage, frequency and duration of use, then its side effect will be mild or not manifest. However, it is 100% impossible to rule out side effects such as acne, water retention, increased aggression, increased blood pressure, baldness, testicular atrophy or gynecomastia.
