Halotest, know as Halotestin is one of the most powerful androgen anabolic steroid (AAS) that is used for treating the low level of the testosterone in men, breast cancer in women, anemia and the delayed development of the puberty in boys.

Halotest is a very popular product for bodybuilders. It is a very good product for powerlifters, fighters, and strength athletes because it is great for cutting and hardener of the muscle mass with no water retention and at the same time it adds aggressiveness. On the other hand, Halotest is very toxic to the liver and it is not recommended to be used for a long period and in big dosages. It increases the blood cell which in turn could lead to a tiredness and not as energetic as before.

Side effects: increased hair growth, increased sexual desire, acne, voice change, gynecomastia, increased aggressiveness, breast pain, testicular atrophy, flushing. It is a toxic product that can damage the liver and increase the blood pressure. To minimize the effect of the toxicity, it should be combined with Omega and Liver

protection

products.

Administration

For most bodybuilders, max 20mg per day is enough to accomplish the desired gains. And it should not be taken more than 2-4 weeks. It should be taken on an empty stomach.
