Description

Strombalt - is available in the form of tablets. It is a steroid drug, it improves the metabolism, gives rise to strength indicators and removes water from the body. In the first year gives a good anabolic effect, an increase of 5-7 kg of dry and quality musculature, but then it should be taken in conjunction with other steroid agents. Professionals of its properties are suitable for weight loss, drying and drawing relief.

It is well used in conjunction with other steroids, since it increases the intensity of their effects at times. This is due to the fact that Strombofort lowers the level of globulin, this releases testosterone from the ligament to the carrier proteins, and as a result increases the level of free testosterone. In addition, Strombofort neutralizes the activity of progesterone and tarragon, which makes it a good supplement for taking drugs with high estrogenic activity.

Strombofort preparation is rather soft and musculature from it grows slowly, but the phenomenon of recoil is practically absent.

Course of admission

Dosage is individual and is determined in the area from 10 mg for athletes and from 50 to 60 mg per day for bodybuilders. Female athletes are recommended a dose of 5 to 10 mg per day. The course of taking Strombofort should last no more than 8 weeks, then the risk of liver damage increases.

Side effects

Because of the property of Stromafort to remove water, joint pain can occur, but this usually occurs with an increase in dosage. Also, high dosages can trigger an increase in blood pressure, increase cholesterol levels, and cause hair loss, acne and liver damage.

There are no side effects from Strombofort if you follow the recommended dosages and do not exceed the duration of the intake. In the course Stromboforta can include hepatoprotectors.

Reviews

Improved relief of muscle tissue.

Increased endurance and strength.

Removal of excess fluid from the body.

Acceleration of metabolism.

Enhance the effect of other anabolic steroids.

Antiprogestant and antiestrogenic effects.
