STROMBAFORT + CLEMBUTEROL + CLOMED CYCLE

The Cycle is designed for men who aim to reduce subcutaneous fat and obtain relief. The course consists of one anabolic steroid – **STROMBAFORT** and not steroid - Clenbuterol. As a result of this combination, it is possible to reduce fat reserves by 4-6 kg and keep the muscle mass unchanged. **STROMBAJECT AQUA** injections will block Cortisol and will prevent a catabolic process. For the best results of the Cycle we recommend to follow the diet: protein diet or B.Phillips's carbohydrate alternating diet. During the Cycle, refrain from alcohol; it will harm the processes of lipolysis.

STROMBAJECT AQUA - will allow to achieve deep relief and preserve muscularity. The product will help to hold muscles during low-calorie diets. The use of the drug will lead to growth of strength, and the muscles will become hard and relief, venosity is manifested.

CLEMBUTEROL -is used in medicine for the treatment of bronchial asthma. It is widely used in bodybuilding and fitness due to its ability to burn fat, so it is often used for weight loss and drying. Cycle with Clenbuterol complement Tiroxin and Ketotifen to improve results. Clenbuterol is not a steroid, it is an adrenomimetic, which affects by excitation of beta-2-adrenergic receptors, and therefore starts lipolysis - fat burning. The dosage should increase gradually and also decrease! The dosage is selected for a guy weighing 90 - 100 kg.

It is important to understand that Anabolic Steroids are good helpers in achieving your dream goal, but they will not work for you in the gym and watch how you eat! To achieve the best results, you should follow a strict diet. Use sports

nutrition: complex amino acids or protein, etc. Sports nutrition allows you to supply the body with the necessary amount of protein and allows you to maintain a diet.

After- Cycle therapy.

CLOMED - is a drug used to restore self - testosterone level. The use of the drug is obligatory, because after a long use of steroids in the bodybuilder's body there is an imbalance of hormones, which will cause side effects such as gynecomastia, reduction of libido, sluggish erection and rapid tiredness.

How to use?

STROMBAFORT – from 1st till 40th day take 30 mg daily

CLENBUTEROL – 8th and 9th day take 1 tablet in the morning; 10th 11th 12th -take 2 tabs in the morning; from 13th till 35th day take 2 tabs in the morning and 1 tablet in the afternoon; 36th day take 2 tabs in the morning; 37th day take 1 tablet in the morning
