Description

Sustamed - comes in injection form. It is a steroid drug with a strong anabolic effect. It increases the supply of tissues with oxygen, due to which there is an increased synthesis of proteins, an increase in endurance, an increase in muscle mass and strengthening of bone tissue. On a course lasting from 5 to 7 weeks, you can gain up to 10 kg of muscle tissue. At the heart of the drug Sustamed, lie 4 testosterone esters. Each of them has a different period of action and is included in the work consistently. The first of them gives its effect already the day after the injection, and the last enters on the 7th day. Thus, a continuous impact on the body and a strong increase in strength. It is worth remembering that testosterone is a flavoring ether and has a high androgenic effect, so it is better to take it in conjunction with anti-estrogenic drugs, for example with Providom. Competent

therapy after the completion of the course of Sustamed, will help to preserve the results for a long time and avoid the effects of aromatization. Course of admission

The course of Sustamed lasts from 5 to 7 weeks, the absolute maximum is 8 weeks. Injections are done 2 times a week. Dosage is calculated at a rate of 250 to 750 grams per week. But the choice of dosage should be individual, depending on the purpose, sports experience, experience in the use of steroids and your weight. To achieve maximum effect, the drug can be used with other anabolic steroids.

Side effects

Side effects from Sustamed are most often manifested in cases when athletes do not use antiestrogens on the course of the drug. In some cases, there may be increased hair flow or alopecia, acne. Aromatization is overestimated as a rule already on 3-5 week of a course, therefore it is necessary to start to accept inhibitors of estrogens. Reviews Gives a strong anabolic effect. Strongly reduces catabolic action. Increases stamina and strength. Increases libido. Moderate accumulation of liquid.
